

SYMBOLS GLOSSARY

(UNI 15223-1:2017)

European conformity (CE) mark with notified body identification number for Class IIA.

Manufacturer Manufacturer

REF Catalog number

LOT Batch code

Use-by date

Avoid humidity. Keep dry

淡

Keep away from sunlight

 $\mathbf{1}$

Consult instructions for use

TYPICAL MATERIAL PROPERTIES AND CHARACTERISTICS

Chemical description	Synthetic material (PA) 99,9%-100%	
Pigments and additive	<0,10%	
Density	1,020 g/cm3	
Modulus of elasticity	2150 MPa	
Vicat softening temperature	258°F	
Solubility	<3,5 μg/mm³	

INTENDED USE

Polyamide resin blanks used to manufacture, after appropriate milling, permanent dental prosthetics to be inserted in the oral cavity.

STORAGE

Store the product in its box, protect against heat and direct sunlight.

INSTRUCTIONS FOR USE

Polycam requires milling with water or air cooling. When air cooling is used pay attention to keep the material cool during milling.

NOTES FOR DESIGN OF BRIDGES AND CROWNS

occlusal wall minimum thickness
cervical wall minimum thickness
transversal section connectors anterior area
transversal section connectors posterior area

In case of teeth in the posterior area, no more than two missing pontics between two abutments.

NOTES FOR MILLING

Different milling procedures from those used for PMMA are required, because the material has different impact strenght and it tends to "burn": you need to be faster in the tool movement and then go faster (more rotations per minute).

The following processing data, speed and movement of the tool must be "adjusted" from the dental technicians according to shape and thickness of the prosthesis to be processed. Indicative data for milling:

PROCEDURE	TOOL	Ø тооL	ROTATION SPEED RPM	FEED RATE	CUTTING DEPTH	COOLING
ROUGHT CUT	1 flute	2-2,5 mm 3 mm	22000 Rpm	24mm/min	0,4 mm	Water
ROUGHT CUT	1 flute	2-2,5 mm 3 mm	16000 Rpm	22mm/min	0,4 mm	Air
FINISHING	1 flute	1 mm	20000 Rpm	24mm/min	0,2 mm	Water
FINISHING	1 flute	1 mm	16000 Rpm	20mm/min	0,2 mm	Air

DISPOSAL

Wastes of Polycam can be disposed of through the domestic residual waste system. Polycam is insoluble in water, inactive and is not hazardous to ground water.
